
EVERYTHING IN ORDER

The cutlery is usually found in the drawer and the rubbish bin under the sink. Order has many facets.

For some families, religious dietary rules determine the rules of order, others need everything in its place so that things can be done as quickly as possible. Hygiene plays an equally important role in most kitchens. Good stock-keeping and exemplary sorting create safety. Is the dishwasher properly loaded? The daily struggles for the right order and the distribution of tasks in the kitchen are an expression of a pluralistic and increasingly complex society.

This is also expressed in the furnishings of kitchens, whose drawers and cupboards are full of personal stories. We sort memories by smells. They are among the strongest human sensory perceptions.

At the interface between romanticising tradition, such as hand-ground coffee along with grandma's apple pie, and a modern lifestyle, kitchen users have to choose what they prefer. Some accessories from the last century still reflect the handling of Germany's colonial past.

Binational marriages and religiously diverse families are more often faced with the question of how to live the greater diversity of both partners in the kitchen and which traditions should be maintained.

Kitchen is a sensual place. The kitchen staged here invites you to discover and try it out.
